

ReCollector

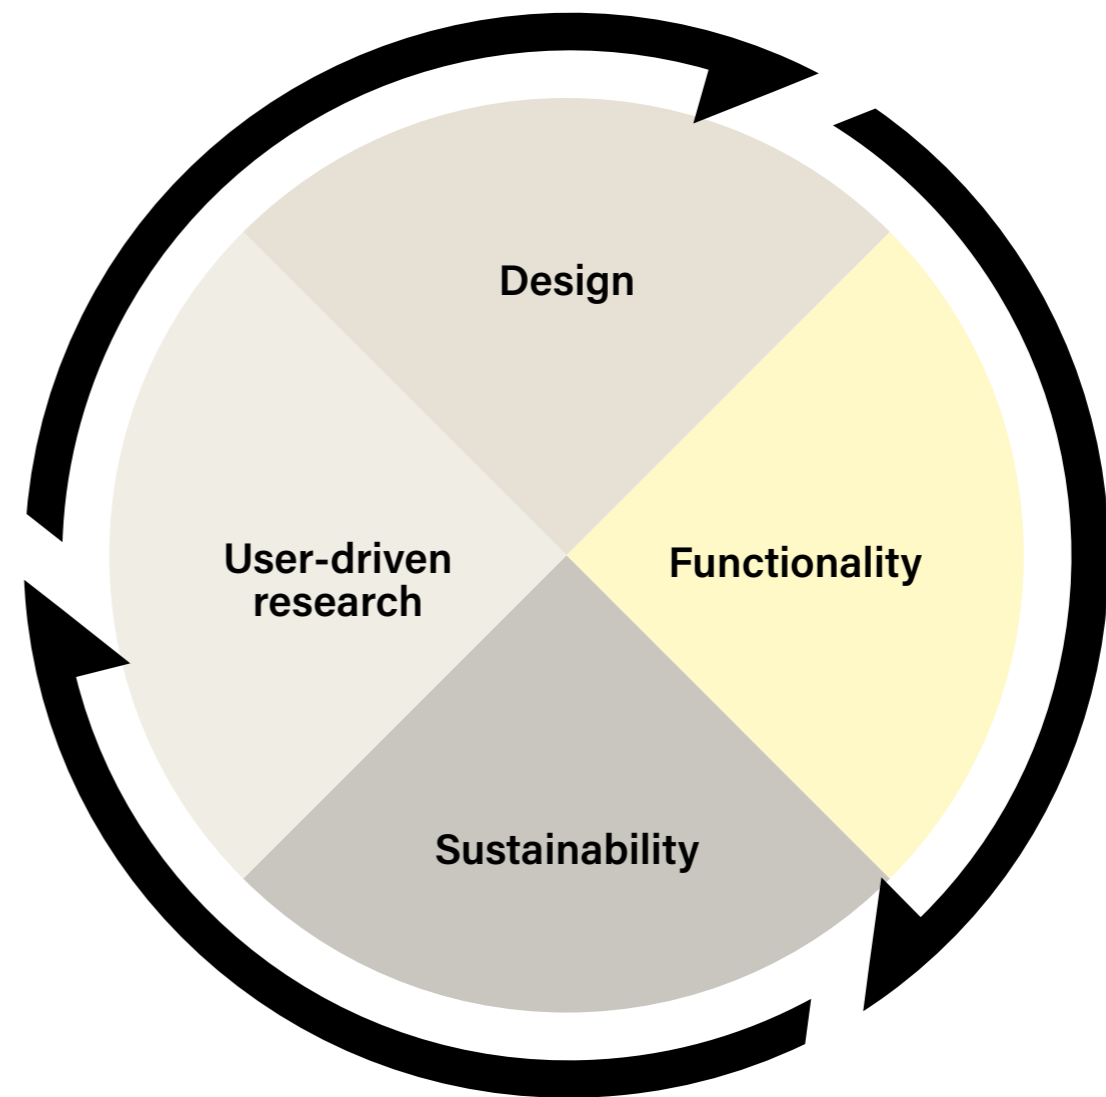

ORGANIZES EVERYDAY LIFE

At ReCollector, we develop products based on everyday needs, design, and, not least, with consideration for our environment.

THOUGHTFUL DESIGN.**

User-driven research

—

ANTHROPOLOGICAL RESEARCH TO DESIGN

We use anthropological research to design and create products that better meet people's needs. By studying human behavior and culture, we are able to understand the consumers' desires and needs more accurately. Anthropological methods such as observations and interviews help gather in-depth data about consumers, leading to more user-centered solutions and helps identify and address challenges consumers face in everyday life. In short, anthropology helps create more meaningful and user-friendly designs that better cater to people's needs and create positive experiences.

At Recollectors, our goal is to assist consumers in organizing, sorting, and storing their belongings at home. We achieve this through designs rooted in anthropological research. By leveraging insights from anthropology, we create solutions that cater to users' needs and behaviors, ensuring efficient and meaningful organization. Our designs aim to enhance the user experience and promote a harmonious living environment.

To combat the stressful effects of clutter, it can be beneficial to develop good organizational habits and establish routines to keep the home tidy. This may include regular decluttering, organizing belongings, utilizing storage systems, and adopting a minimalist approach. It's important to find a balance that works and not strive for perfection, as that can create additional stress. Everyone has different preferences and tolerances for clutter and our aim is to make it easy to sort, organize and store items and thereby create well-being and peace of mind.

Functionality

—

MODULAR STORAGE SOLUTIONS

Our modular storage solutions are versatile and customizable options that can be adapted to different spaces and storage needs. The modules are flexible and easily adjustable to the specific requirements of each room, and they can include shelves, cabinets, drawers, and baskets that help organize items in the home efficiently. Hanging storage systems are an effective way to utilize walls and free up floor space.

Design

—

NORDIC DESIGN

ReCollector is designed in a classic Nordic style characterised by simplicity, clean lines and contemporary colours. In our current collection we bring the colours of nature inside, creating a sense of calm and security. The design mounts to the wall so you are not limited to whatever space you have beneath the sink where waste is often stored.

What's more, we believe that being organized is an important part of our greener future and so deserves to be out on display. We have taken great care of the design and colours to make sure ReCollector looks beautiful in your home.

Sustainability

RESPONSIBLE PRODUCTIONS AND MATERIALS

Our commitment to responsible production is evident in our use of recycled plastic and FSC-certified wood. With production centered in Europe, we prioritize flat-packaging whenever possible to reduce CO2 emissions during transportation. Additionally, we provide documentation for all our products.

**A FRAMEWORK, WHERE SMALL AND
LARGE BOXES FORM A BEAUTIFUL
AND PRACTICAL FRAME.**

Laundry
Suitable for laundry
and larger storage
Size: 43 x 30 x 70 cm

Shoebox (coming soon)
Suitable for shoe storage
and other storage
Size: 60 x 20 x 40 cm

Shelves
Fits the width of 2 x ReCollector
small + original. Size: 15 x 60 cm

Small
Suitable for smaller waste
sorting and storage
Size: 30 x 10 x 20 cm

Recycling box
Suitable for waste sorting
and storage
Size: 30 x 15 x 40 cm

Waste bags
Recycled waste bags
Fits ReCollector original

RECOLLECTOR RECYCLING BOX

30 x 15 x 40 cm

A ReCollector waste bin consists of an inner and outer box, where the inner box is tilted out with a slight pressure on the bottom. It is therefore not a waste bin with a lid, which also means that you can be sure that it closes completely tightly and thus ensures that the smell remains in the waste bin itself.

The inner box can also be clamped using the rear handle so that it remains open, which makes it easy to get food waste, for example, directly into the box when peeling and cutting.

All waste bins are 12 liters and fit a standard 20 L waste bag, but can be used both with or without a bag. They are easy and quick to clean in the kitchen sink under the tap with soap and water. It is a simple and practical solution to a complex climate problem - and it is a good starting point for an easier, more modern and greener everyday life.

Extra handle on the inner box makes it easy to carry several boxes at the same time. The design seals tightly to stop odours from escaping.

RECOLLECTOR MINI

30 x 10 x 20 cm

ReCollector small is half the size of the original ReCollector. It has been developed for sorting smaller types of waste – e.g. light bulbs, batteries etc.

ReCollector small can also be used for storage in the children's room or in the bathroom.

— RECOLLECTOR LAUNDRY

43 x 30 x 70 cm

With ReCollector Large, you get a solution that is light and airy in its expression. It is wall-mounted, making it convenient for a bathroom or utility room, particularly when it comes to cleaning and moisture. At the same time, you save space compared to more traditional round laundry baskets and ensure a decorative and neat solution for your home.

As usual, we consider the environment, and the box is made of FSC-certified wood in Poland. The linen-colored bag inside the box is sewn from GOTS-certified fabric and laminated with a light plastic layer. This material ensures that the bag also retains moisture from wet laundry.

STYLISH, WOODEN SHELVES IN FSC CERTIFIED WOOD

15 x 60 cm

Introducing the stylish and FSC certified wooden shelves, the perfect addition to any modern living space. Crafted from sustainably sourced FSC pinewood, these shelves are not only visually appealing but also environmentally conscious.

These shelves fit perfectly on top of two ReCollector boxes, making them an excellent storage solution for small apartments and homes. They not only add an elegant touch to your space but also provide a practical way to organize and display your favorite decor items.

fits ReCollector mini

— THE STORY

I started ReCollector because I had been unable to find a waste sorting solution with both optimal functions and a stylish design.

I am passionate about innovative solutions and my background in anthropology means I always base my solutions around a concrete need or challenge that is yet to be solved.

Coming up with a design solution for waste sorting was totally new to me but a highly meaningful task as it contributes towards something important.

Tenna Holdorff Christiansen
– Founder and CEO ReCollector

Tenna is an anthropologist and has worked for many years developing solutions with a considerable human focus. It was also through many conversations with people about their recycling needs, habits and barriers to waste sorting at home that a solution first began to take shape.
